

QuantumEdgeAI Best Practices for Success (updated 1.31.2025)

Best Practices:

Since the QuantumEdgeAI bots trade between 3:00am and 4:00pm ET, you want to prepare your strategies before 3:00am ET on MONDAY morning. Best Practice is to enable the bots SUNDAY evening or early MONDAY morning before 3:00am ET for the entire week and then disable them on FRIDAY after 4:00pm ET market close.

If you use a VPS, to keep your VPS running optimally, it is recommended that you empty the recycle bin and re-start your VPS once a month (minimum), weekly is better. You can do this at any time over the weekend before preparing (enabling) your strategies for the week.

To keep NinjaTrader running optimally, it is recommended that over the weekend (after you've closed NinjaTrader) you remove the cache and all historical data by going into `\Documents\NinjaTrader 8\db` and deleting ONLY these four subfolders: `\cache`, `\day`, `\minute`, and `\tick`.

Adjustments to NinjaTrader Settings (you only have to do this once):

It is recommended that you make some adjustments to the following NinjaTrader Settings via the NinjaTrader Control Center (you only have to do this once):

- Go to **Tools** -> **Options** -> **General** and check **Confirm on window or tab close** to avoid inadvertently closing a chart window (with a strategy attached to it).
- Go to **Tools** -> **Options** -> **Trading** and uncheck **Confirm order placement** to avoid NinjaTrader from opening a popup window to confirm each order placed.
- Go to **Tools** -> **Options** -> **Strategies** -> **NinjaScript** and change **On connection loss Handling** to **Keep running** and **Disconnect delay seconds** to **300** in order to keep your strategies running if there is a connection loss (so when the connection is automatically reestablished, the strategy will resume as if no disconnection occurred).

QuantumEdgeAI - Contract Rollover Instructions

It is recommended that we wait until after Market Close (4:00pm ET) before rolling over into the next contract month. Therefore, on the day of contract rollover, if/when NinjaTrader pops open a window asking if you want to rollover futures contracts... to avoid any rollover issues, DO NOT rollover futures contracts UNTIL after market close.

It is recommended that we roll all of the contracts by going into **NinjaTrader's Control Center -> Tools -> Database Management -> Rollover**

Please follow these Step-by-Step instructions:

Step by Step Rollover Guide (after 4pm (US Eastern Time) on Day of Rollover

- 1) On the **Positions** tab, Flatten Everything. If no open positions, then disable all the bots on the **Strategies** tab AND **Cancel All Orders** on the **Orders** tab
- 2) Disconnect from real time data
- 3) On NinjaTrader's **Control Center**, go to **Tools -> Database Management -> Rollover**
- 4) Save the workspace and close NinjaTrader
- 5) Re-open NinjaTrader, and then rollover futures instruments one more time (if necessary) via pop up window or from **NinjaTrader's Control Center**, go to **Tools -> Database Management -> Rollover**
- 6) Save Workspace
- 7) Enable the bots

Q: Why do we wait until after Market Close or until the end of the CME Globex trading hours session?

A: These bots use the RTH Trading Hours templates. Therefore, you won't be able to enable the bot until after the market opens on the day of rollover. If you rollover futures contracts before the Trading Hours template start time (i.e. 9:30am ET), since the opening price hasn't printed yet for that Trading Hours template, the bot will not enable.
